

SQL Monitor 3.4 release notes

May 21st, 2013

New features

- Time ranges and comparison on the Analysis graph are fully customizable, making it easier to identify unusual patterns of behavior.
- There are now more ways to manipulate the Analysis graph (not available in IE7 and 8), including:
 - clicking and dragging to change the time frame
 - zooming in and out with the mouse wheel
- Log files can be retrieved from the Configuration -> About page.

Fixes

- **SRP-8159:** Jobs which fail after running for more than an hour are not reported.
- **SRP-8941:** Alert emails do not include the drive letter.
- **SRP-4735:** Deleting a custom metric while using it on the Analysis page causes on-screen errors.
- **SRP-1363:** Analysis page settings revert to default when the user navigates away.
- **SRP-2061:** Custom time range on the Analysis page is shown as --- in drop-down menu.
- **SRP-8852:** Problem connecting to the SQL Server error logs via file share.
- **SRP-3623:** Scroll bar on the Output tab in the Alert inbox isn't displayed in IE.

Known issues

The Analysis page may be slow if you're using Internet Explorer 7 and 8. For the best SQL Monitor experience, please [update Internet Explorer](#).
