SQL Data Generator 3.0 release notes

Version 3.0.1.560 - January 2nd, 2014

Features

- SQL Server 2012 support
- Column-intelligent data generation
  You can use the Python script or Simple expression generators to generate data in one column based on the data from another. You can use this to enforce application-level constraints on your test data.
- Shareable custom generators
- Greater control over the generation of data for columns with foreign keys
- Various bug fixes and user interface enhancements
