SQL Prompt 6.1 release notes

September 23rd, 2013

Features

- Server/database connection filtering
  You can now specify the databases you want SQL Prompt to load suggestions for. See Managing database connections.
- Major performance improvements
- Added copy button back to object definition box
- Added option to disable synonym support
- Autocompletes ALTER statements with SQL Azure

Fixes

We've fixed the following bugs that were reported by users:

- Tab history won't lock up SSMS on startup if the server/network is unavailable
- Suggestion list won't popup after a SELECT * FROM table allowing snippets to be inserted
- Exception when debugging into stored procedures

We've also fixed the following bugs that were send to us as error reports from SQL Prompt:

SP-4842	{SA} SqlException @ DatabaseCandidateBase.CreateSynonyms(…)
SP-4843	{SA} SerializationInvalidTypeException @ XMLSerializeFormatter.#bco(…)
SP-4847	{SA} IOException @ Initialization.InitializeDatabaseFile(…)
SP-4848	{SA} NullReferenceException @ CandidateCollectionMultiType`1.Add(…)
SP-4849	{SA} NullReferenceException @ DatabaseCandidate2005.CopyMasterObjects(…)
STM-111	{SA} NullReferenceException @ TabWatcher.GetDocumentText(…)
STM-126	{SA} ArgumentException @ VsTextViewUtils.GetWindowFrameAndHierachy(…)
STM-129	{SA} ArgumentNullException @ ExistingQueryReader.ExistingQueryReader(…)
