

SQL Prompt 7.4 release notes

Version 7.4.1.603 - February 16th, 2017

Features

- Support for SQL Server Management Studio 17
- Formatting improvements:
 - Improvements to BEGIN...END formatting
 - Improvements to nested parentheses
 - Case statements with comments now align correctly
 - Now adds a space before aliases following function calls ([forum](#))
 - Added "Place BEGIN keyword on new line" option. You can use this to keep BEGIN on the same line as IF, for example:

```
IF @BusinessEntityID > 0 BEGIN
    DELETE FROM HumanResources.Employee_Temporal
    WHERE BusinessEntityID = @BusinessEntityID;
END
```

- Azure support:
 - Visual Studio Azure connection support
 - Azure active directory universal authentication support

Fixes

- Fix problem with Add/remove AS keyword in MERGE statements
- Fix window functions and GROUP BY suggestions ([forum](#))
- SQL Prompt now always escapes an alias if it's a keyword ([forum](#))
- Columns are no longer qualified inside their own table definition ([forum](#))
- Add/remove square brackets no longer adds brackets to customizable event attributes ([forum](#))
- SQL Prompt no longer expands wildcards for ambiguous column lists ([forum](#))
- Fix performance issue with licensing ([forum](#))
- SP-6079: Intellisense no longer shows blank values for table aliases ([forum](#))
