

# Visual Studio Team Services

## Installation

See [Microsoft documentation](#) for installation instructions

You can find the plugins on the [Visual Studio Marketplace](#)

## Hosted Agents

SQL Change Automation supports Windows Hosted Agents

## Local Agents

## Requirements

- Powershell 3 or greater ([download](#))
- Microsoft ODBC Driver 13.1 for SQL Server ([download](#))
- Microsoft Command Line Utilities 14.0 for SQL Server ([download](#))

After installing the above, the machine (or agent process) must be restarted: the above installer adds the utility to the PATH system environment variable, enabling SQL Change Automation to find and execute the SqlCmd utility.

## Installation

You do not need to install anything, the add-on will automatically install and use the latest version of SQL Change Automation.

If this does not work for you, you can still follow the instructions in [Installing PowerShell components](#)
