Bamboo

Server

Requirements

Bamboo 5.3 or later

Installation

See Bamboo marketplace for installation instructions

Agent

Requirements

- Powershell 3 or greater (download)
- Microsoft ODBC Driver 13.1 for SQL Server (download)
- Microsoft Command Line Utilities 14.0 for SQL Server (download)

After installing the above, the machine (or agent process) must be restarted: the above installer adds the utility to the PATH system environment variable, enabling SQL Change Automation to find and execute the SqlCmd utility.

Installation

See Installing PowerShell components
