

SQL Monitor 3 documentation

SQL Monitor 4.1 and earlier versions contain a security vulnerability. This is fixed in SQL Monitor 3.10 and SQL Monitor 4.2.

For more information, see [this page](#).

About SQL Monitor

SQL Monitor is a web-based monitoring and alerting tool for SQL Servers.

It displays real-time data about the current performance of all host machines, SQL Server instances, and databases that you choose to monitor, and raises alerts when problems occur.

For more information, see the [SQL Monitor product page](#).
