

SQL Backup Agent connecting to SQL Server

You can use SQL Backup Pro to back up SQL server with encrypted connection or using Server Certificate

Encrypted Connection

To do this:

1. Open Registry Editor and locate *HKEY_LOCAL_MACHINE\SOFTWARE\Red Gate\SQL Backup\BackupSettingsGlobal(local)* or *<instance name>*
2. Create a new DWORD type registry entry called *ConnectionEncrypt* and set the data value to *1*.
3. From the Windows Services panel, stop and restart the SQL Backup Agent service.

Connect by trusting the Server Certificate

To do this:

1. Open Registry Editor and locate *HKEY_LOCAL_MACHINE\SOFTWARE\Red Gate\SQL Backup\BackupSettingsGlobal(local)* or *<instance name>*
2. Create a new DWORD type registry entry called *ConnectionTrustServerCertificate* and set the data value to *1*.
3. From the Windows Services panel, stop and restart the SQL Backup Agent service.

To reinstate default connection, set the data value to 0 or delete the *ConnectionTrustServerCertificate* and *ConnectionEncrypt* entry.
