

# DLM Automation 2 documentation

## About DLM Automation

The Database Lifecycle Management (DLM) Automation tool works with build servers and release management tools to provide continuous integration and automated deployment for your SQL databases. You can control DLM Automation by using the [DLM Automation PowerShell cmdlets](#) or by using one of the [DLM Automation add-ons](#).

These pages cover **DLM Automation 2**. Help for [the previous version](#) is also available.
