

Requirements and supported systems

- [Requirement](#)
- [Supported source control systems](#)
- [Supported authentication methods](#)
- [Permissions](#)
- [Database and database version support](#)

Requirement

To use SQL Source Control, you need:

- SQL Server Management Studio 17, 18, 19
- Windows Server 2012, Windows Server 2016, Windows 7, Windows 8 or Windows 10
- .NET Framework 4.7.2 or later
- MDAC 2.8+

Supported source control systems

SQL Source Control is designed to work with:

- [Git](#)
Requires git command line to be installed and on the path (See [Git](#) for more details)
- [Subversion](#)
Version 1.5 and later
- [Team Foundation Server](#) (including [Azure DevOps](#))
2008 and later (you may also need a compatible version of Team Explorer. For details, see [Team Foundation Server version compatibility](#))

Other source control systems

Other source control systems (including Mercurial) are supported, but they're not so well integrated into the user interface. To use them, you can:

- [use a working folder](#)
- [create a custom setup](#)

For more information about linking to these source control systems, see [Linking to source control](#).

Supported authentication methods

- Windows Integrated Authentication
- SQL Password Authentication
- Active Directory Password Authentication
- Active Directory Integrated Authentication

If you are interested in database version control with **Azure Active Directory Interactive Authentication (MFA)**, try [Flyway Desktop](#), Redgate's next generation of SQL Source Control, available as part of Flyway Teams or Flyway Enterprise. Find out more about switching your license and get in touch with our [sales team](#) for a demo.

Permissions

The permissions you need to use SQL Source Control depend on the objects in your database schema. For more information, see [Permissions](#).

Database and database version support

SQL Source Control version support aligns to Flyway Teams's support for a standalone license, and Flyway Enterprise's support if licensed as part of SQL Toolbelt, Toolbelt Essentials or Flyway Enterprise.

Visit the [Supported Databases for Flyway](#) page for more detail.

SQL Source Control doesn't support SQL Server 2000, 2005, 2008/R2 or SSMS 2016 and older.

If you are interested in database version control with **Azure SQL Database**, **Azure SQL Database Managed Instances**, **Amazon RDS for SQL Server**, or **SQL Server on Google Cloud Platform**, try [Flyway Desktop](#), Redgate's next generation of SQL Source Control. [Try it](#) or get in touch with our [sales team](#) for a demo.
