

Configuring frequent updates

To configure frequent updates, on the **Help** menu, click **Configure Frequent Updates**. The frequent updates window appears.

Ticking **Show frequent update releases** will allow frequent update releases to be found when checking for updates. Unticking it will prevent frequent update releases from being shown.

If you've already installed a frequent update release and you turn frequent updates off, you'll stay on that version until you either:

- install a newer standard update (when one is available)
- uninstall the product, download it again from the product page, and reinstall it
